Office Action Summary

Application No.

09/385,666

Applicant(s)

Suaya And Gabillet

Examiner

Thai Phan

Art Unit

2123

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on Aug 26, 1999.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11; 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 15-57 is/are pending in the application.
- 4a) Of the above, claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 15-57 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claims _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) ☐ All b) ☐ Some* c) ☐ None of:

- ☐ Certified copies of the priority documents have been received.
- ☐ Certified copies of the priority documents have been received in Application No. _____.
- ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

*See the attached detailed Office action for a list of the certified copies not received.

- 14) ☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).

a) ☐ The translation of the foreign language provisional application has been received.

- 15) ☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 2) ☒ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s). 7 & 8 6) ☐ Other:

DETAILED ACTION

This Office action is response to patent application S/N: 09/385,666. Claims 15-57 are pending in this Office action.

Drawings

1. The drawings are objected to by the draftsman drawing review (see enclosed PTO Form 948).

Specification

2. It is noted that this application appears to refer subject matter disclosed in prior copending Applications No. 09/052,895 and 09/052,915, filed Mar. 31, 1998. A reference to the prior application must be inserted as the first sentence of the specification of this application. Also, the current status of all nonprovisional parent applications referenced should be included.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claims 15-57 are rejected under 35 U.S.C. 102(e) as being anticipated by Chen, James, US patent no. 6,414,498 B2.

As per claim 15, Chen anticipates method and system for measuring cross-coupling capacitances in an integrated circuits with feature limitations as claimed (Summary of the Invention). According to Chen, the measurement method includes steps of providing at least first and second wires in a wire interconnection structure (col. 3, lines 10-30), charging interconnect wiring to a predetermined voltage by charging means (col. 3, lines 59-65), performing a first measurement associated with a capacitance of the first wire (col. 5, lines 35-59), charging the second wire to the predetermined voltage, recharging the first wire to the predetermined voltage, performing a second measurement associated with a capacitance of the first wire, and calculating a difference between the first and second measurement to determine the cross-coupling capacitance between the first and second wire as claimed (Background of the Invention, col. 5, line 35 to col. 7, line 33).

As per claim 16, Chen anticipates coupling series transistor with configuration as claimed (Fig. 1).

As per claim 17, Chen anticipates applying periodic signals to the transistor gates as claimed (Fig. 1).

As per claim 18, Chen anticipates applied signals are periodic and synchronous or not simultaneous (col. 5, line 48 to col. 6, line 55).

As per claim 19, Chen anticipates charging and discharging interconnection wires in order.

As per claim 20, Chen anticipates measuring cross-coupling capacitances for multiple wire interconnections.

As per claims 21-22, Chen anticipates means for measuring cross coupling capacitances for multiple neighbor wires and using the same measurement techniques for wire neighbor.

As per claim 23, Chen uses transistors in conjunction with transmission wire for measurement.

As per claims 24-25, Chen anticipates capacitance measurement for wires in multilayer integrated circuit, repeating the measurement over a number of cycle over a timing diagram to compute a correct measurement (cols. 5-6).

As per claims 26 and 27, Chen anticipates measuring charge and current for capacitance measurement.

As per claims 28-31, Chen anticipates logic inverter connected between transmission wires for the test interconnect charging circuit (Fig. 1, block (117)).

As per claim 32, Chen anticipates charging mechanism as claimed for capacitance measurement, namely, charging transmission wire for a cycle time period, discharging for other time cycle, measuring rate of discharging and coupling capacitance (col. 5, line 35 to col. 7, line 18).

As per claims 33-34, Chen anticipates transistor in conjunction with transmission wires and effect of neighbor wires in capacitance measure.

As per claim 35, Chen anticipates method and system for measuring cross-coupling capacitances in an integrated circuits with feature limitations as claimed (Summary of the Invention). According to Chen, the measurement method includes means for providing a first and second transistors coupled in series (Fig. 1), means for providing at least first and second wires in a wire interconnection structure (col. 3, lines 10-30), charging interconnect wiring to a predetermined voltage by charging means (col. 3, lines 59-65), performing a first measurement associated with a capacitance of the first wire (col. 5, lines 3559), charging the second wire to the predetermined voltage, recharging the first wire to the predetermined voltage, performing a second measurement associated with a capacitance of the first wire, and calculating a difference between the first and second measurement (subtraction) to determine the cross-coupling capacitance between the first and second wire as claimed (Background of the Invention, col. 5, line 35 to col. 7, line 33).

As per claim 36, Chen anticipates low/high logic values feature as claimed.

As per claims 37-38, Chen anticipates a logic coupled to the interconnection wires such logic including inverter, gates, etc. as claimed (Fig. 1).

As per claims 39-41, Chen anticipates the claimed limitations for measurement of cross-coupling capacitance.

As per claim 42, Chen anticipates ammeter for measuring cross-coupling capacitances.

As per claim 43, Chen anticipates measurement of cross-coupling capacitance for multiple neighbor wires to the first wire.

As per claim 44, Chen anticipates means for measuring cross coupling capacitances for multiple neighbor wires and using the same measurement techniques for wire neighbor.

As per claims 45-46, Chen anticipates capacitance measurement for wires in multilayer integrated circuit, repeating the measurement over a number of cycle over a timing diagram to compute a correct measurement and the measurement is accomplished with library element or with measurement tools (cols. 5-6).

As per claim 47, Chen anticipates method and system for measuring cross-coupling capacitances in an integrated circuits with feature limitations as claimed (Summary of the Invention). According to Chen, the measurement method includes means for providing a first and second transistors coupled in series (Fig. 1), means for providing at least first and second wires in a wire interconnection structure (col. 3, lines 10-30), charging interconnect wiring to a predetermined voltage by charging means (col. 3, lines 59-65), performing a first measurement associated with a capacitance of the first wire (col. 5, lines 35-59), charging the second wire to the predetermined voltage, recharging the first wire to the predetermined voltage, performing a second measurement associated with a capacitance of the first wire, and calculating a difference between the first and second measurement (subtraction) to determine the cross-coupling capacitance between the first and second wire as claimed (Background of the Invention, col. 5, line 35 to col. 7, line 33).

As per claims 48-50, Chen anticipates such feature limitations for cross-coupling capacitance measurement.

As per claim 51, Chen anticipates method and system for measuring cross-coupling capacitances in an integrated circuits with feature limitations as claimed (Summary of the Invention). According to Chen, the measurement method includes means for providing a first and second transistors coupled in series (Fig. 1), means for providing at least first and second wires in a wire interconnection structure (col. 3, lines 10-30), charging interconnect wiring to a predetermined voltage by charging means (col. 3, lines 59-65), performing a first measurement associated with a capacitance of the first wire (col. 5, lines 35-59), charging the second wire to the predetermined voltage, recharging the first wire to the predetermined voltage, performing a second measurement associated with a capacitance of the first wire, and calculating a difference between the first and second measurement (subtraction) to determine the cross-coupling capacitance between the first and second wire as claimed (Background of the Invention, col. 5, line 35 to col. 7, line 33).

As per claim 52, Chen anticipates ammeter being used to measure current for capacitance measurement.

As per claims 53-54, Chen anticipates cross-coupling capacitance in multiple neighbor wires or interconnection wires.

As per claim 55, Chen anticipates multilayer interconnection in an integrated circuit under capacitance measurement.

As per claim 56, Chen anticipates inverter in conjunction with interconnection wires for capacitance measurement (Fig. 1, cols. 4-6).

As per claim 57, Chen anticipates timing for charging and transistors are not activated simultaneously as claimed (cols. 5-6).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

1. US patent no. 5,212,454, issued to Proebsting, Robert, on May 1993
2. US Patent no. 6,011,731, issued to Beigel et al., on Jan. 2000
3. US patent no. 6,249,903 B1, issued to McSherry et al., on June 2001
4. US patent no. 6,300,765 B1, issued to Chen, James, on Oct. 2001

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thai Phan whose telephone number is (703) 305-3812.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703)305-3900.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

or faxed to:

(703) 746-7239, (for formal communications intended for entry)

Or:

(703) 746-7240 (for informal or draft communications, please label

"PROPOSED" or "DRAFT")

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive,
Arlington, VA., Sixth Floor (Receptionist).
